

GHOST-PRIME

Use a computer just by talking.

A voice assistant that does the task for you,
built on a school Chromebook.

Ivan Lucky KUNDWA · Grade 9 · Ntare Louisenlund School

Computers expect fast typing and small text.

Typing takes time

hard for students who type slowly

Small text is hard to read

especially on small screens

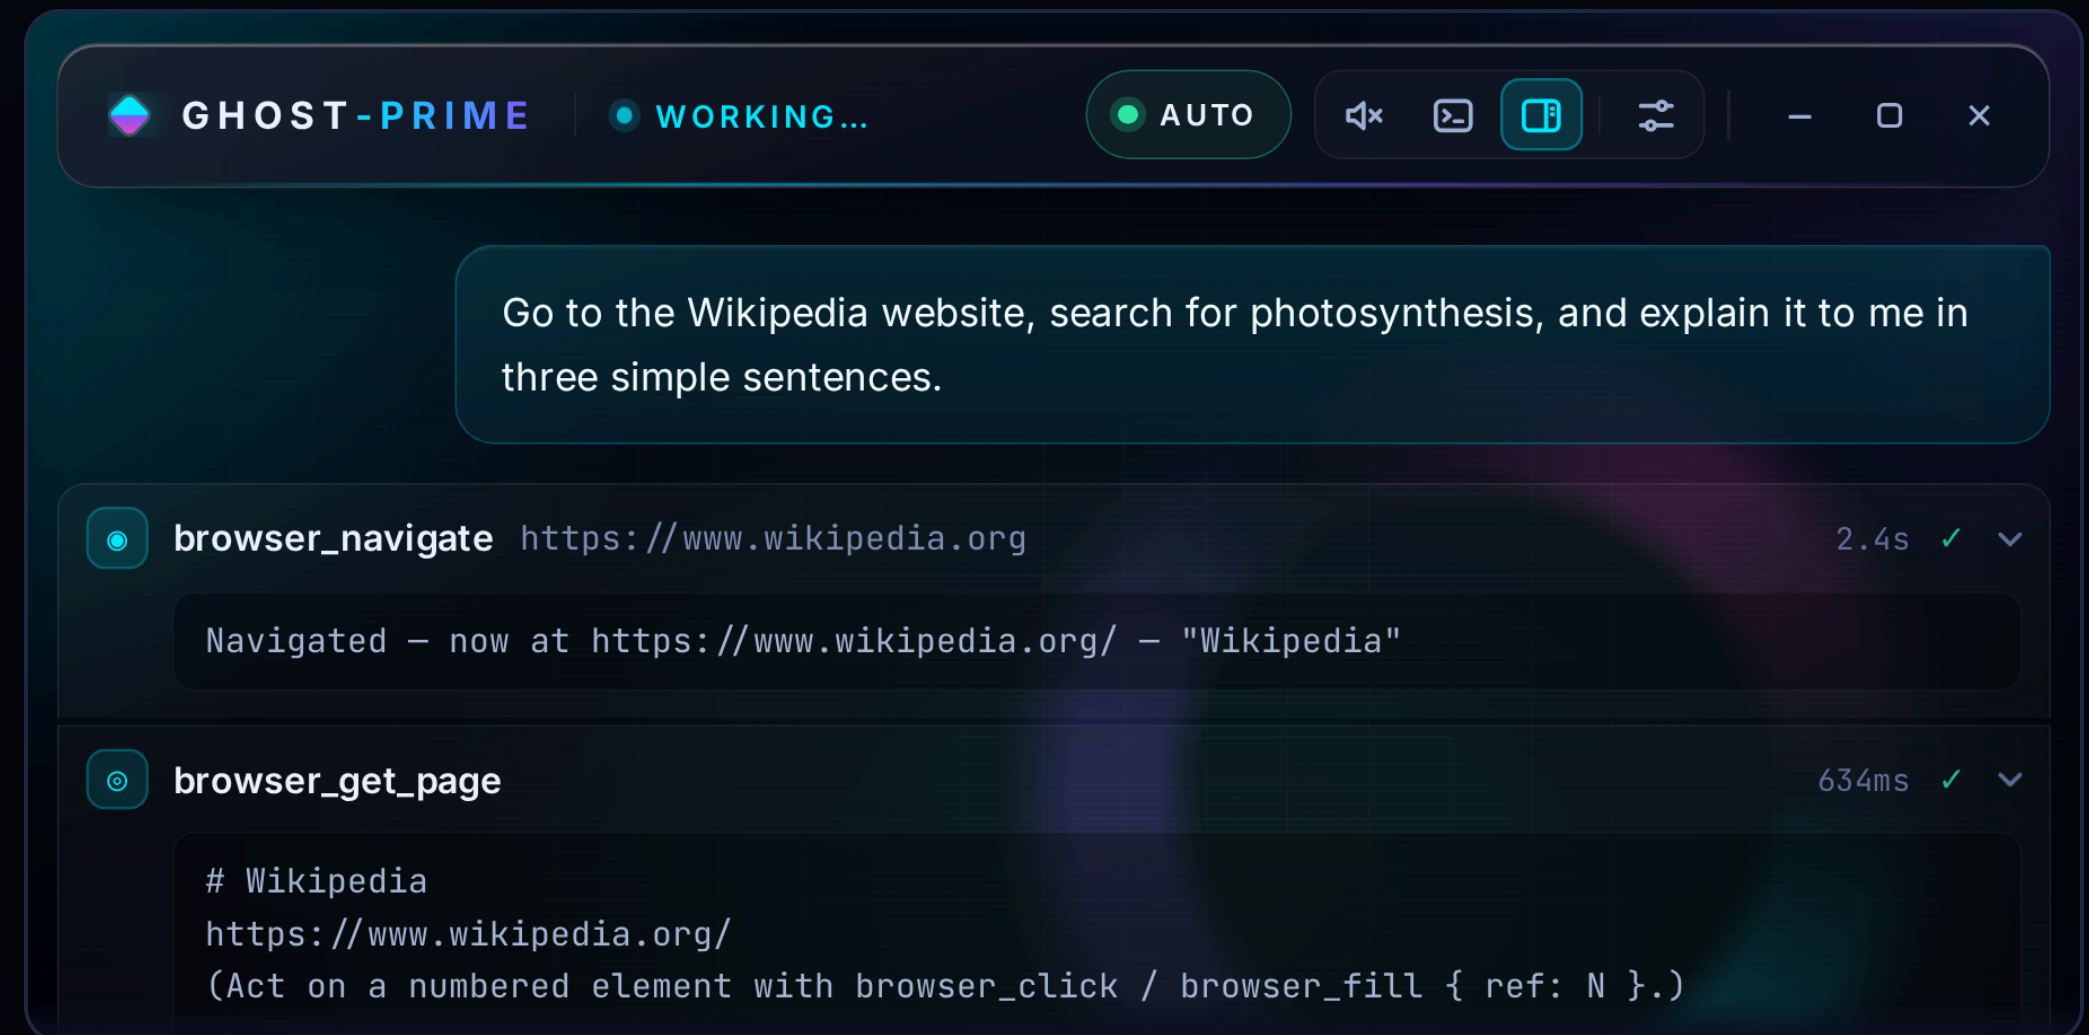

Menus and tiny buttons

confuse people new to computers

A chatbot only tells you the steps. You still have to do them.

Say what you want. Ghost-Prime does the steps.

- 1 **You ask**
by voice or by typing
- 2 **An AI plans the steps**
Claude, in today's demo
- 3 **Ghost-Prime does them**
websites, files, commands
- 4 **It tells you**
and can read the answer aloud

The real app screen, with a scripted sample of the demo.

“Go to the Wikipedia website, search for photosynthesis, and explain it to me in three simple sentences.”

WATCH FOR THESE STEPS

```
browser_navigate → browser_get_page → browser_fill → browser_get_text
wikipedia.org      [6] Search Wikipedia (search) [6] "photosynthesis" ↵ Photosynthesis - Wikipedia
```

Three simple sentences, as asked.

GHOST CLAUDE

Here's photosynthesis in three simple sentences:

1. Photosynthesis is how plants, algae and some bacteria make their own food using sunlight.
2. They take in carbon dioxide from the air and water from the soil, and the green pigment chlorophyll captures light energy to turn them into sugar (glucose).
3. Oxygen is released as a by-product, and that is where most of the oxygen we breathe comes from.

In short: **carbon dioxide + water + light → glucose + oxygen**. I left the Wikipedia page open in the browser if you want to read more.

The real app screen, with a scripted sample of the demo.

One app on the Chromebook drives real tools.

ON THE
INTERNET

Google Gemini, free tier
turns your voice into text
normally also answers quick questions

Claude, by Anthropic
plans every step in today's demo

You
speak or type

GHOST-PRIME APP · ON THE CHROMEBOOK

Voice **WORKS · BY HAND**
offline voice mode as a backup

Tools
Web browser · Terminal · Files + undo
Web search · Memory · Reminders

Android phone app **IN PROGRESS**
tested only on a simulated phone

Chrome extension **IN PROGRESS**
tested only in a headless browser

What works today

Uses websites for you	WORKS • TESTED
Runs commands in a terminal	WORKS • TESTED
Files, with undo	WORKS • TESTED
Remembers you, sets reminders	WORKS • TESTED
Searches the web	WORKS • BY HAND
Listens and talks back	WORKS • BY HAND

TESTED passed automated tests on 25 Sep 2026

BY HAND works in my own testing; no automated test runs it live yet

64

tools the Claude brain can use

523

automated checks passed, 0 failed,
in 34 offline test suites,
25–26 Sep 2026

You choose how much it can do.

PLAN

Only looks.

AUTO

On the Claude brain, an automatic safety check decides each action.

The showcase launch starts here.

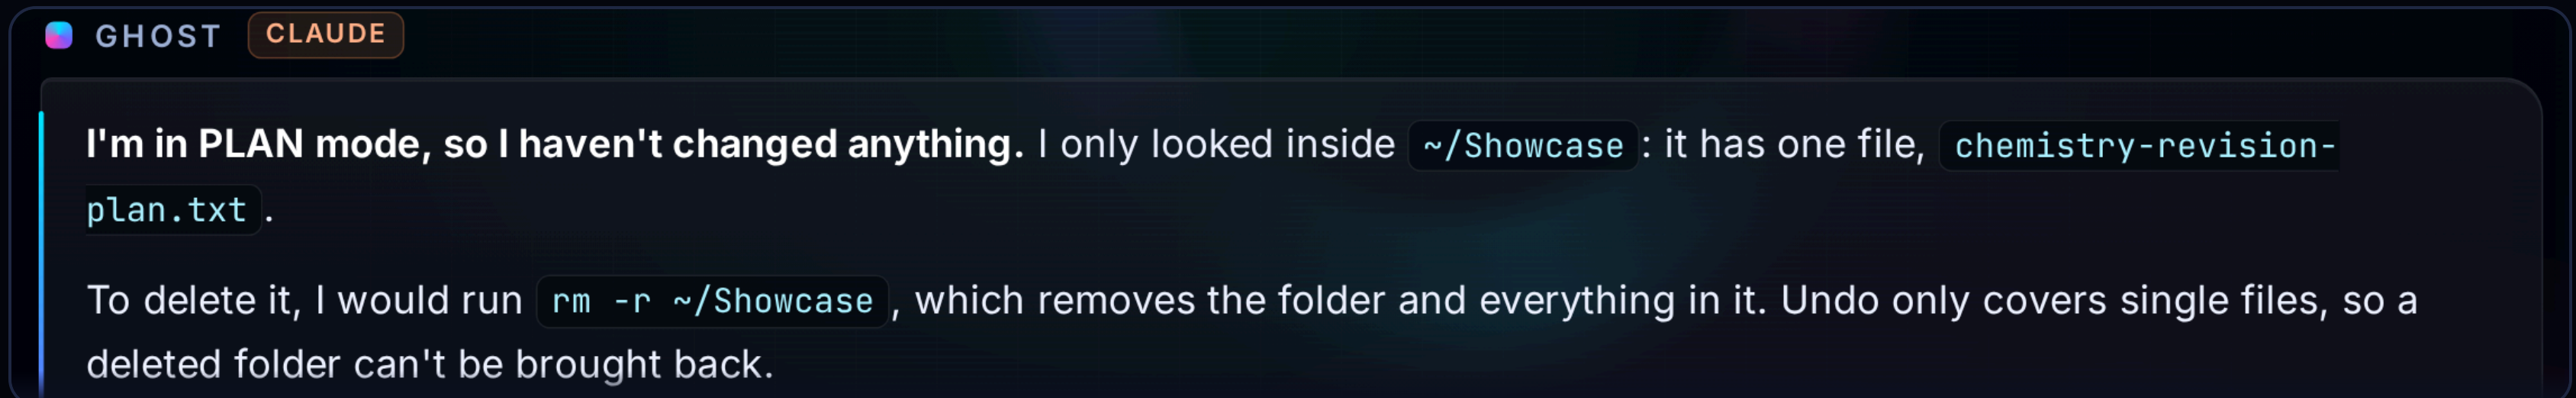

FULL AUTO

Runs everything.

Plain Ghost-Prime starts here.

Not yet: an “Are you sure?” check.

IN PLAN MODE: “DELETE THE SHOWCASE FOLDER.”

The real app screen, with a scripted sample of the demo.

Where your data goes

STORED ON THE CHROMEBOOK

Chats

Memories

Reminders

Files

SENT TO THE AI

The conversation

Your top 8 saved memories

The pages and screenshots it reads

Your voice, to Google

unless offline voice is on

Be careful: Google's free tier may use what you send.

COST

No pay-per-use bills.

AI

It runs on Google's free AI plus a Claude subscription I already had, and it can run on the free tier alone (less capable at long tasks).

HARDWARE

A Core i3 school Chromebook

SOFTWARE

Built with free, open-source tools (Electron, Playwright, SQLite, Whisper, three.js).

Who it's for

Students who type slowly

say it instead of typing it

People who find small text hard to read

hear the answer instead of reading it

People new to computers

plain words instead of menus

Busy teachers

hand over the clicking and typing

NOT YET

**I haven't tested
it with these
groups yet.**

**That's my next
step, and my ask.**

Next, in this order

- 1 Test it with real students and teachers**
especially people who find computers hard **PLANNED**
- 2 Try the phone app on a real Galaxy A05**
tested only on a simulated phone so far **IN PROGRESS**
- 3 An "Are you sure?" check**
before anything that can't be undone **PLANNED**
- 4 Kinyarwanda**
listening, speaking and menus **PLANNED**
- 5 An easy installer**
so other schools can try it **PLANNED**

Murakoze!

Thank you. Questions?

Tell me a topic at the booth, and I'll ask it.

Ivan Lucky KUNDWA · Grade 9 · Ntare Louisenlund School

WHO BUILT IT

I designed it, decided what it should do, tested it, and used an AI coding assistant (Claude Code) to write much of the code.

AI: Claude (Anthropic), Gemini (Google). **Intro video:** AI-generated with Higgsfield.

Quick PC tools (battery, weather): MARK LIII JARVIS by FatihMakes (CC BY-NC 4.0).

Fonts: Archivo, Inter, JetBrains Mono.
