

Use a computer just by talking.

A voice assistant that does the task for you, built on a school Chromebook.

The Ghost-Prime app during the photosynthesis demo.

How it works

[1] You ask, by voice or by typing.

Google turns your voice into text, unless offline voice is on.

[2] Claude plans the steps.

Claude does the thinking in today's demo, so every answer shows a **CLAUDE** tag. Normally a router can also send quick questions to Google's free Gemini.

[3] The app does each step where you can see it.

It reads the page as a numbered list, then types and clicks:

```
browser_navigate wikipedia.org
browser_get_page [6] Search Wikipedia (search)
browser_fill [6] "photosynthesis" ↵
browser_get_text Photosynthesis - Wikipedia
```

Try it with me

- 1 Give me a topic, or use mine: **photosynthesis**.
- 2 I ask Ghost-Prime for you, by voice or by typing:
"Go to the Wikipedia website, search for photosynthesis, and explain it to me in three simple sentences."
- 3 Watch it work, and hear the answer.

Privacy. What you ask goes over the internet to Claude (Anthropic) and Google. Please don't share anything private.

Safety. It runs in AUTO: Claude's automatic safety check decides each action. PLAN only looks. There is no "Are you sure?" pop-up yet.

What works, and what's next

Uses websites for you

25 SEP

WORKS • TESTED

In its own browser window: reads pages, clicks, fills forms.

Files, with undo

25 SEP

WORKS • TESTED

Creates and moves files, and can undo it.

Remembers and reminds

25 SEP

WORKS • TESTED

Remembers you from day to day. Sets reminders.

Listens and talks

WORKS • BY HAND

Voice works in my own testing; the real mic and speaker are only checked by hand.

Phone control

IN PROGRESS

Built, tested only on a simulated phone.

Who it's for

Computers expect you to **type fast** and **read small text**. Not everyone can.
I haven't tested it with these groups yet. That's my next step, and my ask.

Students who type slowly

Say it instead of typing it.

People who find small text hard to read

Hear the answer read aloud.

People new to computers

Ask in plain words.

Busy teachers

Look things up, set reminders.

Ivan Lucky KUNDWA

Grade 9 • Ntare-louisenlund

I designed it, decided what it should do, tested it, and used an AI coding assistant (Claude Code) to write much of the code.

No pay-per-use bills. It runs on Google's free AI plus a Claude subscription I already had, and it can run on the free tier alone (less capable at long tasks).

64

tools (Claude brain), counted 25 Sep 2026

523

automated checks passed, 0 failed, in 34 offline test suites (25–26 Sep 2026)

3

months of building, 17 Jun – 25 Sep 2026

Built with free, open-source tools (Electron, Playwright, SQLite, Whisper, three.js).
