

The 30-second pitch

FOR VISITORS

Hi! I'm [YOUR NAME]. **II PAUSE**

This is **Ghost-Prime**. You talk, and it **opens websites, clicks, types and reads the answer aloud**. **II PAUSE**

I built it on a school Chromebook, with help from an AI coding assistant. It has no pay-per-use bills.

It's for students who type slowly, people who find small text hard to read, people new to computers, and busy teachers. **I haven't tested it with these groups yet.** That's my next step, and my ask.

Give me a topic, and watch.

Never claim

- × "It controls my phone"
- × "Just say 'Hey Ghost'"
- × "It always asks first"
- × "It's free and works offline"
- × "Ghost-Prime is open source"
- × "It's made for children"
- × "It helps teachers" (as proven)
- × "Voice is fully tested"
- × "It runs on two AI brains"
- × "The first" or "the only one"
- × "It speaks Kinyarwanda"
- × "It controls any app"

The 2-minute slot

FOR JUDGES • START A STOPWATCH ON YOUR FIRST WORD

0:00 Name, class, school. "What if you could use a computer just by talking?" (Point at the chat box.) "I typed this before we started, so you don't wait. I could also say it." **Enter**

HERO PHRASE • TYPE IT IN BEFORE YOUR SLOT

"Go to the Wikipedia website, search for photosynthesis, and explain it to me in three simple sentences."

STEP CARDS TO POINT AT (EXAMPLE)

browser_navigate wikipedia.org
browser_get_page **[6]** Search Wikipedia (search)
browser_fill **[6]** "photosynthesis" ↵
browser_get_text Photosynthesis - Wikipedia

TALK OVER THE WAIT, IN THIS ORDER

- 1 Problem.** A chatbot only tells you the steps.
- 2 Idea.** "Ghost-Prime does the whole job." (Point at the browser, then the step cards.)
- 3 MUST Who it's for,** as in the 30-second pitch.
- 4 MUST "I designed it, decided what it should do, tested it, and used an AI coding assistant (Claude Code) to write much of the code."**
- 5 Cost.** "No pay-per-use bills," then the free-tier sentence. Short: "No pay-per-use bills, just a Claude subscription I already had."

WHEN TO CHANGE COURSE

- It reads.** Stop talking, even mid-sentence. After it: **MUST** lines left, the short cost line (until 1:45), the ask.
- 1:10** Not reading yet? "It reads the article first, so it can take up to a minute."
- 1:25** Still not reading? "It's taking longer than usual here. I'll show you the answer at the booth." **Stop**
- ASK "My ask: help me test it with real students and teachers. Thank you!"**

The questions judges ask

Say the dark text, then stop. Grey is for follow-ups.

Chromebooks already have dictation, Select-to-Speak, ChromeVox and Google Assistant. Why this?

Those are good tools, and I'm not trying to replace them. Each one helps with one step at a time. Here, one sentence becomes a whole job: it opens the site, searches, reads, explains, and shows every step.

How much does it cost to run?

No pay-per-use bills. It runs on Google's free AI plus a Claude subscription I already had, and it can run on the free tier alone (less capable at long tasks).
If asked: With extra usage turned off, Claude pauses at its limit and never charges extra.

Why does every answer say CLAUDE?

Claude does the thinking in today's demo, so every answer shows a CLAUDE tag. Normally a router can also send quick questions to Google's free Gemini.

Is it safe?

PLAN only looks. In AUTO, on the Claude brain, an automatic safety check decides each action. FULL AUTO runs everything. There's no "Are you sure?" pop-up yet.
If asked: The showcase launch starts in AUTO; plain Ghost-Prime starts in FULL AUTO. Single-file changes made with its file tools can be undone.

Have you tested it with the people it's for?

UPDATE IF SOMEONE TRIED IT

No, not yet. So far I'm the only one who has tested it. I haven't tested it with these groups yet. That's my next step, and my ask.

Is it private?

Partly. Chats, memories and files are saved on the Chromebook. Requests, my top memories and the pages it reads go to Anthropic or Google. So don't tell it anything private.
If asked: Voice goes to Google unless offline voice is on. The free tier may use it to improve Google's products.

What did YOU build?

EDIT TO WHAT YOU DID

I designed it, decided what it should do, tested it, and used an AI coding assistant (Claude Code) to write much of the code.
If asked: Google and Anthropic make the AI brains. The app and the tools around them are Ghost-Prime. Battery, weather and volume tools: MARK LIII JARVIS by FatihMakes (CC BY-NC 4.0)

Is voice tested? What if the free AI runs out?

WORKS · BY HAND

Voice works in my own testing; the real mic and speaker are only checked by hand. If Google's free limit runs out, voice is built to switch to offline, but I haven't tried that for real.
If asked: Today Claude does the thinking and Google does the voice. I can restart in offline voice in about 15 s.

Can it work in Kinyarwanda?

Not yet. The app and the offline speech model are English only. Typing in Kinyarwanda might partly work; I haven't tested that.

Does the phone part work?

IN PROGRESS

Built, not finished. The Android app passes its tests on a simulated phone. I haven't run it on my real Galaxy A05 yet. It's second on my list, after testing with real students and teachers.

NUMBERS YOU CAN QUOTE

~3

AT THE TABLE

Start with **bin/ghost-showcase** (AUTO). Never FULL AUTO.
Keep visitor demos short: they use the Claude allowance.

Sites **strict**: only wikipedia.org and example.com.
Younger visitors may watch; it isn't made for them.

You give visitors' requests. Voice goes to Google.
No deleting, buying, posting, logging in or personal data.

DON'T KNOW? "Good question. I haven't tested that yet." Then write it down.
