

Just talk.

A voice assistant that uses the computer for you.

-  Built on a school Chromebook
-  No pay-per-use bills

Computers expect you to **type fast** and **read small text**. **Not everyone can.**

The real Ghost-Prime app screen. The chats in the sidebar are examples.

WHAT IT DOES

- 
Listens and talks
 Understands speech. It can answer aloud.
- 
Uses websites for you
 Reads pages, clicks buttons, fills forms.
- 
Sorts your files
 Finds, moves and tidies files, with undo.
- 
Remembers and reminds
 Remembers you day to day. Sets reminders.

HOW IT WORKS

- 
You speak or type
 Your voice is turned into text.
- 
The app on the Chromebook
 Picks the right AI brain for the job.
- 
AI brains plan the steps

Claude
 hard, many-step tasks

Gemini (free)
 speech, quick answers
- 
Tools do the work
 Browser · files · terminal · memory · reminders
- 
Done
 You see the result, and it can say it out loud.
- 
IN PROGRESS Phone control: Android app built, not yet tested on a real phone.

WHO IT HELPS

- 
Students
 Research, organise schoolwork, get reminders to revise.
- 
People who find typing or small text hard
 Speak instead of typing. Hear answers instead of reading them.
- 
Teachers
 Open class websites, sort lesson files and set reminders by voice.

[YOUR NAME] • [YOUR CLASS] • [SCHOOL]

Designed and tested by [YOUR NAME], with much of the code written using an AI coding assistant (Claude Code). Powered by Claude (Anthropic) on a subscription the maker already had, and Google Gemini's free tier. Built with open-source software: Electron, React, Playwright, SQLite, Whisper, espeak-ng. What you say is sent to Claude or Google Gemini to be understood, so please don't share private things.
