# The 30-second pitch

About 80 words. Smile, slow down, and point at the screen.

Hi! I'm [YOUR NAME]. PAUSE

This is **Ghost-Prime**, a voice assistant I built on a **school Chromebook**.

You just talk to it, and **it does the job for you**. It opens websites, clicks and types, tidies files, sets reminders, and reads the answers out loud. PAUSE

It's for anyone who finds computers hard: slow typers, people who can't read small screens, and busy teachers. There are **no pay-per-use bills**.

Want to see it? Tell me a topic, and **I'll ask it to look it up on Wikipedia**.

## 10-SECOND VERSION, FOR A CROWD

"This is Ghost-Prime. You talk, and it uses the computer for you. I built it on a school Chromebook. Want to see?"

### NEVER CLAIM

- ✗ It controls a real phone. Tested only on a simulated phone.
- ✗ "Just say hey Ghost." Wake word not installed.
- ✗ "It always asks first." Nothing asks yet.
- ✗ "Completely free" or "works offline."
- ✗ It speaks Kinyarwanda, or controls any app.
- ✗ "It's the first" or "the only one."

**At the table:** mode **AUTO** (never FULL AUTO) · Site access **strict:** only **wikipedia.org** and **example.com** · **you** speak visitors' requests into the mic (voice goes to Google, and the free tier has a daily limit) · children **watch;** the AI services are for over-18s (qa.md, question 16).

# Top 7 questions

Short, true answers. Full versions and follow-ups are in qa.md.

## 1 Chromebooks already have dictation and read-aloud. What's new?

Those tools **type your words or read text aloud**, but you still do every step. With Ghost-Prime, **one sentence becomes a whole job**: it opens the site, searches, reads and explains, or moves files and can undo that. It runs on a **school Chromebook** with no pay-per-use bill, **shows every step**, and works **alongside** those tools, not instead of them.

Tech judges often ask this first. Never say "the first" or "the only one".

## 2 How much does it cost to run?

**No pay-per-use bills and no servers.** Voice and quick answers use Google's **Gemini free tier**. Harder jobs use **Claude**, on a subscription I already had. If its allowance runs out, it **pauses and never charges extra**. It can also run on the free tier alone (weaker at long jobs; still testing).

## 3 Is it safe? What if it does something wrong?

It can make mistakes, like any AI. So **every step shows live**, file changes have **undo** ("undo that"), and I can **limit which websites** it opens. **PLAN** mode only looks and never changes anything, and I don't use FULL AUTO in public. **Not yet**: an "Are you sure?" pop-up before big actions. That's next.

## 4 Is it private?

**Chats, memories and files stay on the Chromebook.** Requests go to **Anthropic** or **Google**. **Voice recordings go to Google** unless I use offline voice, and the free tier can use them to improve Google's products. So: **don't tell it anything private**.

## 5 What did YOU build?

Google and Anthropic make the **AI brains**. I built **everything around them**: the app, voice, browser, terminal and file tools, memory, reminders, the brain-picker and the phone app. I **designed it, decided what it should do, tested it**, and used an **AI coding assistant (Claude Code)** to write much of the code.

Credit: quick controls adapted from MARK LIII JARVIS by FatihMakes. Edit to match exactly what you did.

## 6 Can it work in Kinyarwanda?

**Not yet.** The app is in English, the offline speech model is English-only, and the offline voice has no Kinyarwanda. Typing in Kinyarwanda might partly work, but **I haven't tested it**. It needs Kinyarwanda **speech recognition**, a Kinyarwanda **voice**, a **translated app**, and Kinyarwanda **keywords** for the brain-picker.

## 7 Does the phone part work?

**Built, not finished.** The Android app lets Ghost-Prime see the phone screen as a numbered list and tap, swipe and type. It **passes all its tests on a simulated phone**, but **I haven't run it on my real Galaxy A05 yet**. That's my next step.

**Don't know?** "Good question. I haven't tested that yet." Then write it down.
